For driving the REMS pressing rings M 64.0 – 108.0 XL (PR-3S) with REMS Power-Press XL
Art.-No. 579120 R

£ 320.00

2) The Z6 XL pressing tongs are required for driving the XL pressing rings (PR-3S).
REMS pressing tongs – Proven a million times over. For all common press fitting systems.

Highly durable pressing tongs made of forged, tenacious, specially hardened special steel. The pressing contours of the REMS pressing tongs are system-specific and correspond to the pressing contours of the respective press fitting systems. Perfect system-conformant, reliable pressing as a result. Pressing jaws of the pressing tongs with high-precision cut and exactly rounded pressing contour on CNC machining centres. Much lower production tolerances than only cast pressing contour as a result.

Traceability according to EN 1775:2007

REMS pressing tongs/pressing rings with pressing contour M, V, SA, B, HR and UP have worked a specific marking into the pressing contour which leaves a lasting impression on the pressed fitting after the pressing process. This enables the user to check again whether the most suitable pressing tongs or the suitable pressing ring have been used to make the pressfit connection even after the pressing process.

With this traceability REMS fulfills the recommendations of the European standard EN 1775:2007 for the installation of pressfitting systems for gas.

Example REMS pressing tongs M: Impression “M” on pressed fitting for traceability according to EN 1775:2007
